

Tips For Cool Season Grasses

ECO Lawn and Garden

P.O. Box 1226 | Burnsville | MN | 55337 | (952) 882-8572

The following are tips for caring for cool season grasses. Feel free to contact us with your questions. We're excited to have you interested in our products - used extensively by golf course and gardening professionals. To contact us visit us at www.ecolawnandgarden.com or email us at info@ecolawnandgarden.com.

- A basic lawn program should include granular fertilizer in the Spring and Fall. The remainder of the year the program should consist of the following liquid program that has been very successful with golf courses. We do sell granular fertilizers. Ask about our pricing.
- A basic lawn program should include either 16-4-8 or 10-8-8 or 12-0-12 NPK along with a monthly use of Soil Amend or Soil Amend Plus and GSR MicroBurst Calcium or GSR Turf Rite Calcium. This can be supplemented with ECO MicroBoost or Dark Green for more green color and to add micronutrients to the soil. Bio-Degrader should be used when there is excessive thatch. SSP can be used if the lawn is compacted
- Foliar liquid products last about 14-21 days and in some cases 28 days. Apply 16-4-8, or 10-8-8 or 12-0-12 NPK every 14-21 days.
- Mix it with Soil Amend Plus at least every month. For darker green color mix 16-4-8 or 10-8-8 with 12-0-12 NPK with Dark Green or ECO MicroBoost.
- Most products may be able to be mixed together depending on the amount of water and the sprayer. ****Dark Green and MicroBoost may not mix well with other products.**
- Apply 16-4-8, or 10-8-8 or 12-0-12 NPK at 3 - 10 ounces per thousand square feet of lawn. Six (6) ounces per thousand square feet is optimum.
- Soil Amend can be applied at 6-7 ounces per thousand square feet of lawn.

- Dark Green and ECO MicroBoost should be applied at 4- 6 ounces per thousand square feet of turf.
- GSR MicroBurst Calcium or GSR Turf Rite Calcium should be applied monthly at 2 ounces per thousand square feet for GSR MicroBurst Calcium and 3 ounces for GSR Turf Rite Calcium.
- Bio-Degrader should be applied as needed at 3 ounces per thousand square feet.
- SSP should be applied as needed at 1 - 2 ounces per thousand square feet.
- Any of these products can be skipped, but the most important product for lawns are the NPK Fertilizers 16-4-8 or 10-8-8 or 12-0-12 or GSR MicroBurst Calcium. NPK fertilizers should not be skipped.
- Can be injected into irrigation systems.
- **Summary**
- 16-4-8 or 10-8-8 or 12-0-12 NPK every 14-21 days. 3 - 10 ounces per thousand square feet. 6 ounces is optimum.
- Soil Amend or Soil Amend Plus. Every month. 6-7 ounces per thousand square feet.
- GSR MicroBurst Calcium or GSR Turf Rite Calcium Apply every month. 2 ounces per thousand square feet for GSR MicroBurst Calcium and 3 ounces for GSR Turf Rite Calcium
- ECO MicroBoost or Dark Green. Every 14-28 days. 4- 6 ounces per thousand square feet.
- Bio-Degrader as needed. 3 ounces per thousand square feet.
- SSP as needed. 1-2 ounces per thousand square feet.

Always test mixtures for spraying compatibility before mixing large amounts.
